

Thomas Soules

Retired Physicist

Barbara and I moved to Livermore in 2002. I retired from Lawrence Livermore National Laboratory after retiring as a scientist and engineer at GE Lighting. We love the town of Livermore and have been active in the Livermore Heritage Guild and other Livermore activities. As an expert witness on multiple cases, I learned a lot about the legal system. As a council member I would work to make the city council truly responsive to our citizens, governing from bottom up rather than top down, and make the government totally transparent. I would work to make the city as vibrant as possible, bringing in new businesses and making it attractive to both its own citizens and others. We recently visited the town of Cary, NC which has a new seven-acre park in the middle of town that attracts many families and visitors. Cary had to purchase the land and raze the homes. Livermore already has land at the downtown site. Developing it using a similar model would be a magnet for growth. I would also promote low-income housing assistance, but on a much grander scale. Together we can make Livermore an even more vibrant community. Tomsoules.com
