

PROPER DISPOSAL OF WASTEWATER

Tips For Pet Care Providers

The Clean Water Program's friendly and knowledgeable staff support companies like yours in preventing water pollution. The fact that you're reading this fact sheet probably means you have already decided to take steps to do the right thing with the wastewater from your business. Thank you for helping to keep our water safe and healthy.

Step 1: Filter

Filter the wash water before discharging to the sanitary sewer. Fur and other solids in the wash water can cause blockages in the sewer system. Dispose of filtered material in the garbage.

Step 2: Discharge Properly

It is important that wash water from pet care activities shampoos be discharged into a *cleanout*, sink, toilet or other drain connected to the *sanitary sewer system* — never into a street, gutter, parking lot or *storm drain*. There are two options for disposing of water with pest control chemicals:

- Arrange with your customer to discharge the wash water from their pet into a toilet or utility sink on their premises, after receiving approval from you local wastewater treatment authority. OR
- Empty the wash water into a utility sink or other indoor sewer connection at your home base, after receiving approval from your local wastewater treatment authority.

Keep wash waters, pest control fluids and animal hair OUT of storm drains.

Pouring wash water from pet care activities into the gutters or storm drains will damage sensitive habitats and kill wildlife. Water flowing into storm drains travels directly to local creeks and then to San Francisco Bay. It does not go to a water treatment plant first.

What about biodegradable and non-toxic cleaning products?

These guidelines apply even to cleaning products labeled “non-toxic” and “biodegradable.”

- “Non-toxic” means the product is not toxic to the user.
- “Biodegradable” means the product will eventually break down. Biodegradable products can still harm aquatic wildlife since they need time to break down before they are safe. When biodegradable products enter a creek, they are generally still toxic and can harm wildlife and plants.

What about leftover or unwanted pet shampoos and other pet grooming products?

Unwanted pet care products may contain pesticides or other chemicals that should not be poured down the drain, flushed down a toilet, or put in the trash. Contact the Hazardous Waste agency for your area for more information on proper disposal.

KEY DEFINITIONS

A **Cleanout** is a pipe fitting with a removable plug for inspecting and cleaning out sewer drain pipes.

The **Storm Drain System** was built to collect and transport rain to prevent flooding in urban areas. Anything that flows or is discharged into the storm drain system goes directly into local creeks or San Francisco Bay without any treatment.

The **Sanitary Sewer System** collects and transports sanitary wastes from interior building plumbing systems to the wastewater treatment plant where the wastewater is treated.
